

**AAMHatch acquires ISO 9001 certification**

*ISO 9001  
FS 542572*

*AAMHatch's ISO 9001 certification*

AAMHatch is pleased to announce they have received ISO 9001: 2000 certification, recognising the company's dedication to a systematic approach to quality standards.

AAMHatch has been operating a Quality System based on ISO 9001: 2000 standard for some years. Attaining formal certification was deemed a valuable next step.

This certification provides assurance to our customers and stakeholders that our Quality System complies with the internationally agreed ISO 9001 standard, client and regulatory requirements.

ISO 9001 aims to improve business performance, manage business risk, streamline operations and increase customer satisfaction through the 'Plan, Do, Check, Act' structure. The real objective is to ensure the needs of our customers are considered and met.

The International Organization for Standardisation (ISO) is a global federation of national standards bodies. ISO 9001:2000 certification represents strict adherence to the highest standards and practices through documented procedures that cover all key business processes, monitoring systems to ensure business process effectiveness, thorough record-keeping, and quality monitoring systems facilitating continual improvement in the organisation.

Scott Ramage, Managing Director said, "We are pleased to have achieved ISO 9001 certification and look forward to continually improving our business processes with feedback from our clients, staff and business partners."

**About AAMHatch**

AAMHatch is at the forefront of the spatial information technology revolution. AAMHatch's dynamic team pioneers the commercialisation of exciting innovations such as:

- Pictometry® - Visualise & Analyse
- High Resolution Satellite Imagery (submetre)
- Large format, aerial digital imaging
- Airborne LiDAR
- Terrestrial Laser Scanning
- 360 degree video (fully spherical video).

Operating from an extensive office network throughout Australia, South East Asia and South Africa; AAMHatch specialises in providing business mapping, GIS and Location Based Services.

AAMHatch's proven technology leadership includes a range of advanced systems for the collection, analysis and presentation of geospatial information. Using these tools AAMHatch has built an extensive library of 'off the shelf' digital photography, satellite imagery and high resolution digital terrain models.

The AAMHatch Group is a multi disciplinary team of almost 200 geospatial professionals. AAMHatch has an award-winning culture of project management excellence that actively contributes to client success.
